Amazon Fine Food Reviews Analysis

Data Source: https://www.kaggle.com/snap/amazon-fine-food-reviews

EDA: https://nycdatascience.com/blog/student-works/amazon-fine-foods-visualization/

The Amazon Fine Food Reviews dataset consists of reviews of fine foods from Amazon.

Number of reviews: 568,454
Number of users: 256,059
Number of products: 74,258
Timespan: Oct 1999 - Oct 2012
Number of Attributes/Columns in data: 10

Attribute Information:

1. Id
2. ProductId - unique identifier for the product
3. UserId - unqiue identifier for the user
4. ProfileName
5. HelpfulnessNumerator - number of users who found the review helpful
6. HelpfulnessDenominator - number of users who indicated whether they found the review helpful or not
7. Score - rating between 1 and 5
8. Time - timestamp for the review
9. Summary - brief summary of the review
10. Text - text of the review

Objective:

Given a review, determine whether the review is positive (rating of 4 or 5) or negative (rating of 1 or 2).

[Q] How to determine if a review is positive or negative?

[Ans] We could use Score/Rating. A rating of 4 or 5 can be cosnidered as a positive review. A rating of 1 or 2 can be review of rating 3 is considered nuetral and such reviews are ignored from our analysis. This is an approximate and polarity (positivity/negativity) of a review.

[1]. Reading Data

[1.1] Loading the data

The dataset is available in two forms

1. .csv file

2. SQLite Database

In order to load the data, We have used the SQLITE dataset as it is easier to query the data and visualise the data eff

Here as we only want to get the global sentiment of the recommendations (positive or negative), we will purposefull
If the score is above 3, then the recommendation wil be set to "positive". Otherwise, it will be set to "negative".

Performance Table

```
results
```

	Featuraization	algorithm	k	Train-AUC	Test-AUC
0	BOW	Brute	13	0.7605	0.5516
1	tf-idf	Brute	21	0.7079	0.4996
2	AVG W2V	Brute	49	0.9065	0.8901

```
results_1
```

	Featuraization	algorithm	k	Train-AUC	Test-AUC
0	BOW	kd_tree	9	0.8432	0.6774
1	tf-idf	kd_tree	29	0.7369	0.5754
2	AVG W2V	kd_tree	49	0.8652	0.8930
3	tf-idf W2V	kd_tree	49	0.8487	0.8080

[6] Conclusions

1. KNN is the one of the best algorithm
2. KNN kd_tree gave best results better then Brute force
3. Training time for kd_tree is high compred to brute force algorithm
4. Kd_tree with AVG W2V featuraization and k = 49 gave best AUC Score = 0.8930
